PROFESSIONAL SUMMARY

Computer Science student at NJIT with hands-on experience designing scalable backend services in Go and Python, building production-grade distributed systems, and developing full-stack applications with React. Strong foundation in systems design, concurrency, and API development.

EDUCATION

New Jersey Institute of Technology
Bachelor of Science in Computer Science.

Newark, NJ
May 2029

EXPERIENCE

Research Assistant June 2026 – July 2026
New Jersey Institute of Technology Newark, NJ

- Conducted a systematic review of academic literature on AI's role in spiritual, religious, and human interactions, identifying relevant research threads across interdisciplinary sources.
- Synthesized scholarly sources into evidence-based analysis to support an ongoing interdisciplinary research project.

Virtual Archives Beta Tester Feb 2026 – April 2026
New Jersey Institute of Technology Newark, NJ

- Chosen as a beta tester for a pre-release, AI-powered virtual archives platform.
- Designed and executed structured test cases with reproducible steps, surfacing bugs and usability issues ahead of launch.
- Evaluated AI-driven archive search and retrieval features, identifying edge cases in query handling and result accuracy.

Front Desk Attendant May 2025 – August 2025
Urban Garden Hostel Lisbon, Portugal

- Managed guest check-ins and check-outs, answered inquiries, and provided information about hostel services and local attractions.
- Supported daily operations including organizing common areas and preparing rooms for arrivals.

PROJECTS

Distributed Rate Limiter and Job Queue

Go, Redis, Docker Compose

- Engineered a horizontally scalable rate-limiting service in Go implementing Token Bucket and Sliding Window algorithms via atomic Redis Lua scripts, eliminating race conditions across concurrent instances.
- Built a Redis-backed job queue with a concurrent worker pool, exponential backoff retries with jitter, and dead-letter handling for failure recovery.
- Load-tested at ~22,700 requests/sec with p99 latency under 25ms; containerized with Docker Compose for one-command deployment.

TradePath

JavaScript, React, CSS, Recharts, yfinance, Vercel

- Built a full-stack stock market simulator with live and historical price data via yfinance, supporting virtual trading with real-time portfolio valuation.
- Implemented market and limit order execution with profit/loss recalculated on each price update, avoiding stale-state bugs in naive polling designs.
- Built a normalization layer for yfinance inconsistencies including rate limits and malformed fields, improving data reliability.

Urban Garden Hostel Website

React, WordPress, HTML/CSS/JS

- Delivered a production website for a live hospitality client, implementing responsive layouts that improved mobile load performance and organized content across service and amenity pages.

SKILLS

Languages: Go, Python, TypeScript, JavaScript, SQL, Java, C/C++, HTML/CSS

Frameworks: Flask, FastAPI, Django, Node.js, React, Next.js, Tailwind CSS, Material-UI, WordPress

Developer Tools: Docker, Redis, Git, GitHub, Supabase, Vercel, Render, Stripe, VS Code, Figma

Libraries: pandas, NumPy, Matplotlib, PyTorch

Concepts: Distributed Systems, REST API Design, JWT, OAuth, RAG / Agentic AI, Generative AI Fine-Tuning
